Demo-bank scaling law for the zero-training retrieval prior (demo_1nn, Can)
(a) Bank-coverage scaling law on PickPlaceCan
(b) Mode-coverage decomposition
Closed-loop success rate (Wilson 95% CI)
Prior bank size N_b (log scale)
saturation knee
$N_b = 20$ = eval set size
Canonical 4-seed pool 73.8% CI [67.8, 78.9]
demo_1nn @ canonical $\lambda = 1, \sigma_{max} = 0.25$
In-bank rate (eval demo idx $< N_b$)
Out-of-bank rate (eval demo idx $\geq N_b$)
n/a (full coverage)
Prior bank size N_b
